

Bitahoy

Sichere Kommunikation und Anwendungen, Netzwerk-Überwachung

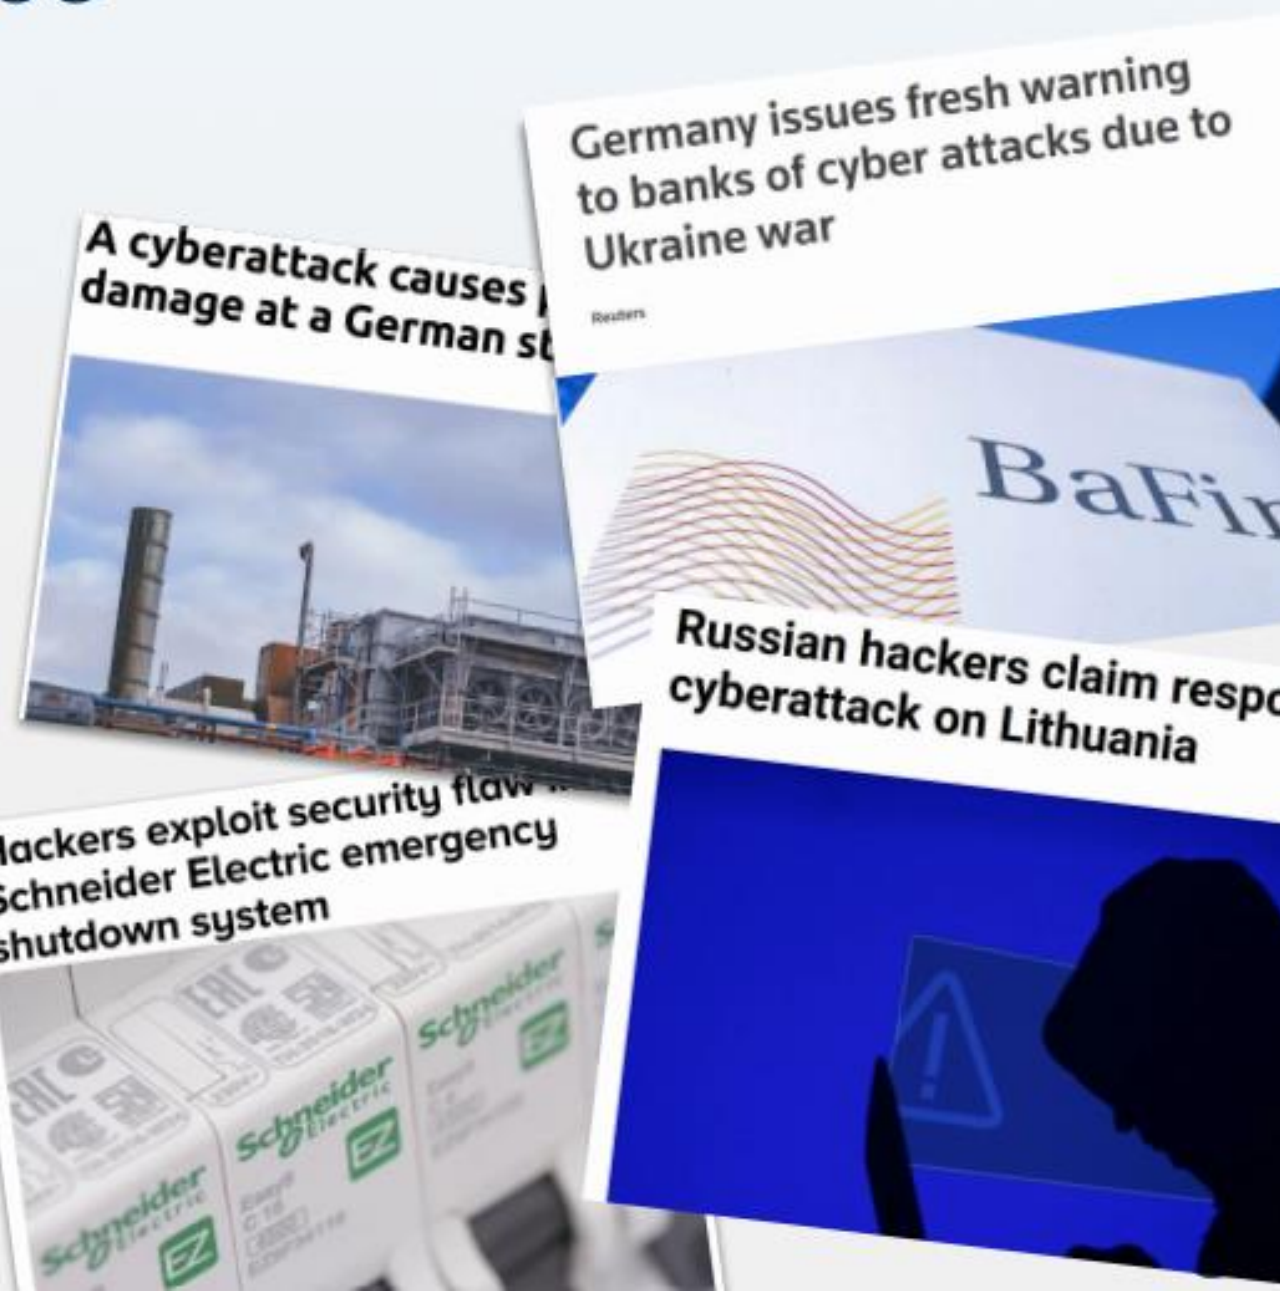

The current
monitoring
solutions are not
suitable for today's
ever-evolving
threat landscape

...and it only gets worse

Twice as many incidents were submitted by the BSI in the 2021 report.^[1]

Longer response time due to the complexity of the attacks and the lack of personnel.^[2]

[1] Die Lage der IT-Sicherheit in Deutschland 2021

[2] Gartner's forecast: Information Security and Risk Management, Worldwide, 2019-2025

Two concrete problems:

Not enough experts

Despite the rising budgets and the growth of the sector

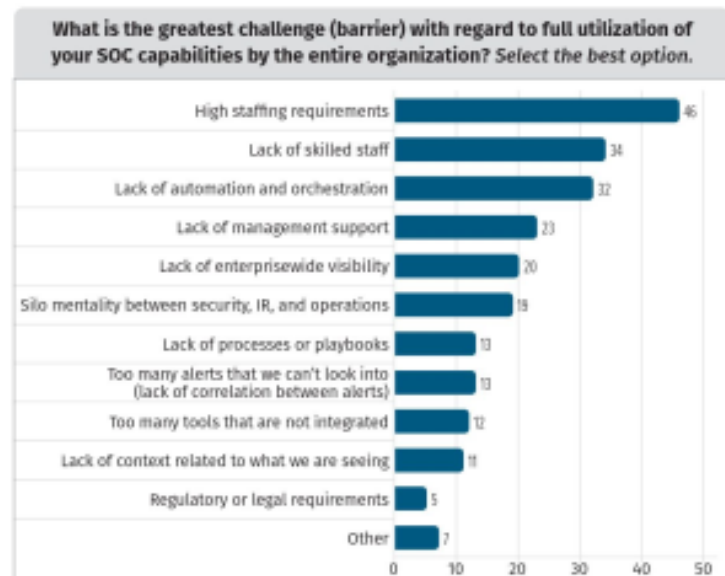

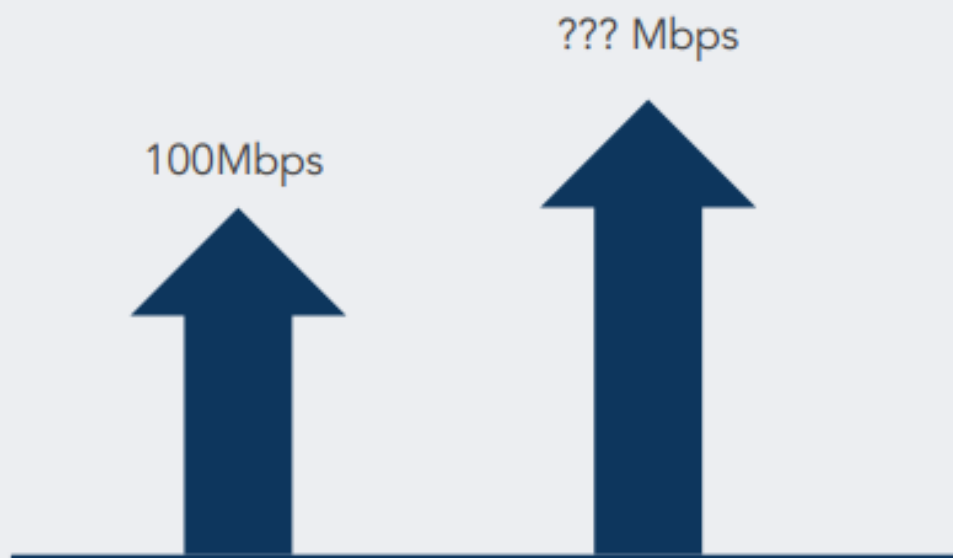

Figure 4. Challenges to Using SOC Capabilities (Q3.61: n=235)

Growing amount of data

More effective communication enables more devices, which in turn means...

The challenge:

Inability to fully leverage
massive scales of data

-

Slow response time due
to human factor

Redesigning the system from the ground up

Enable continuous real-time Intelligence
by turning your data into insights that help your
experts, instead of overwhelming them.

Respond in minutes rather than days
automates response actions using self-learning
AI-driven analytics for accelerated response time.

Outsmart and outpace adversaries

Real-time

Collect, process, and integrate data streams with easy deployment into existing infrastructure, all without any noticeable overhead or complicated setup.

Zero-Trust

Scalable platform that turns your passive SIEM into an active SOAR system by enabling network assets observability and management through policy-based segmentation.

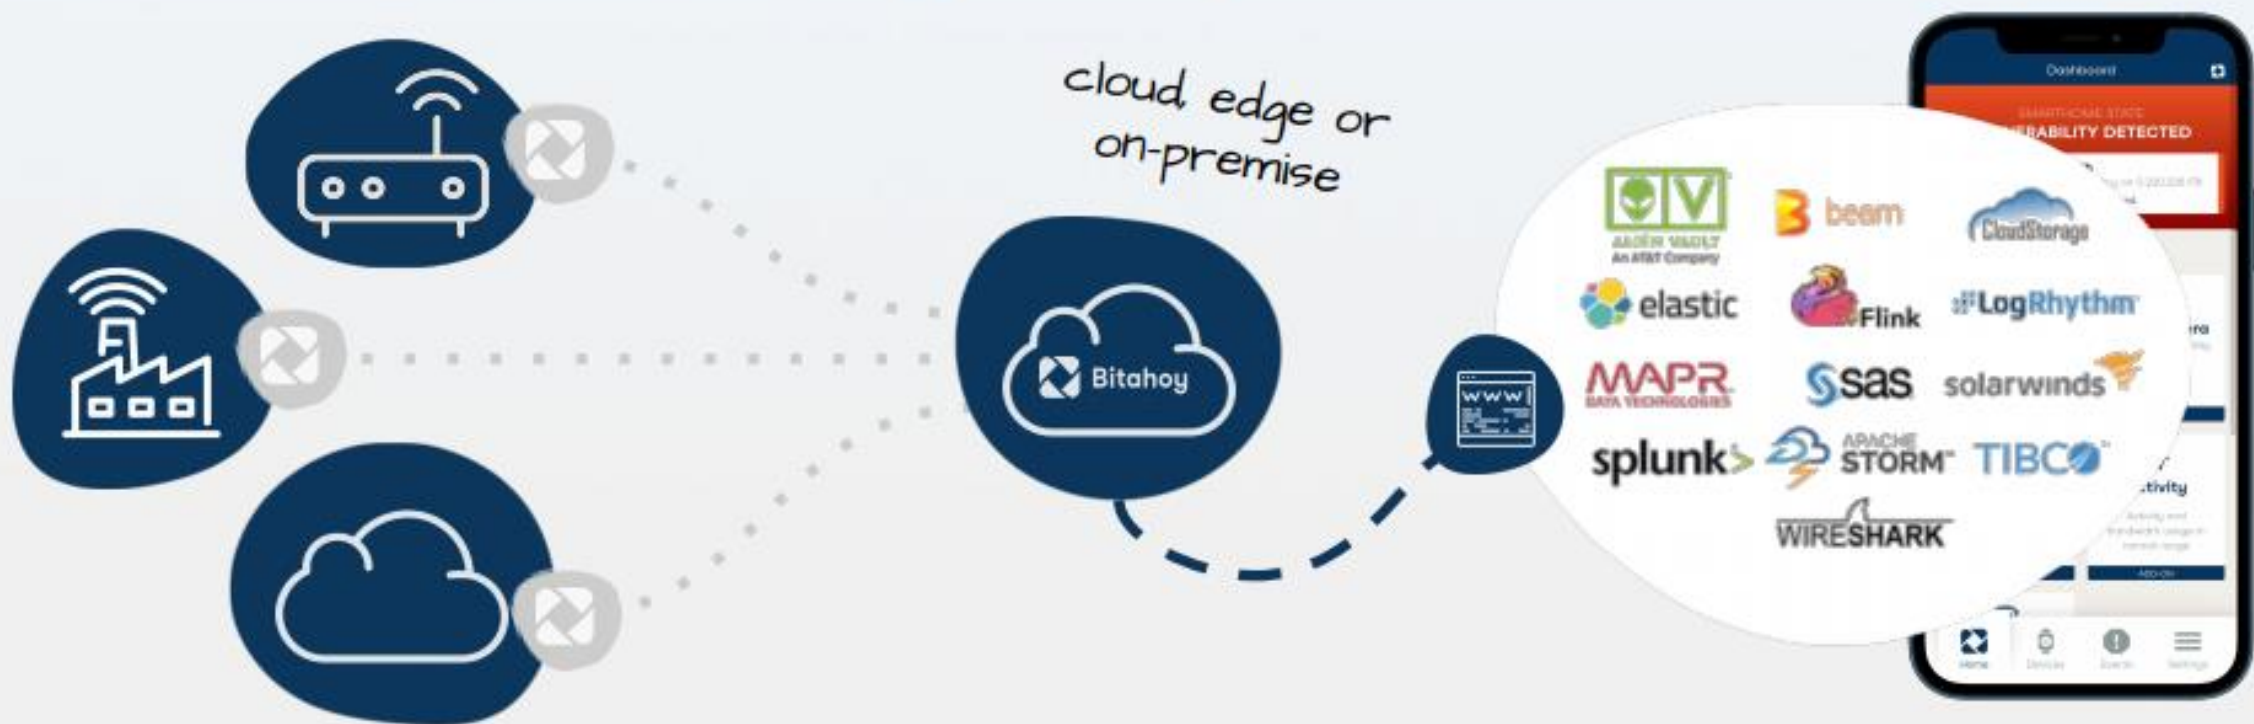

Intelligent

Analysis results are fed into an existing security platform solution, which allows your experts to keep their existing workflow and avoid an unnecessary increase in the total cost of ownership.

Easy integration

Agents are deployed to endpoints and critical services that need to be monitored

The server collects, processes and formats the data, while keeping reactive events in check

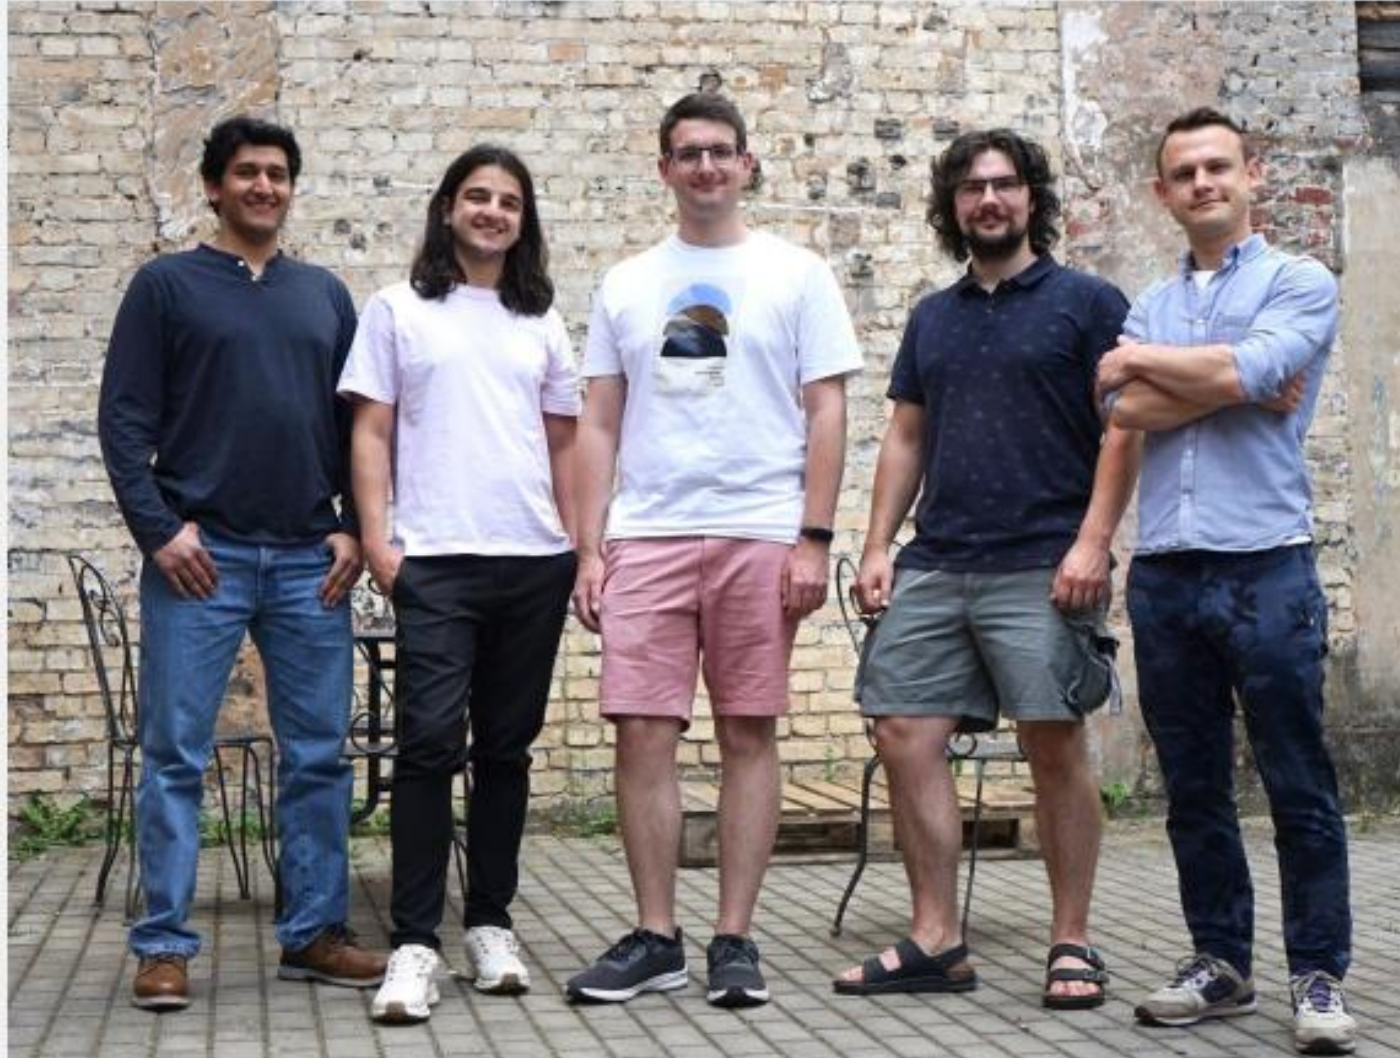

Security and monitoring solutions, as well as our multi-platform app

The vision:

We want to radically transform how organizations do security operations.
